HOW-TO GUIDE

The Adoption of the City of Savannah's 100% Clean Energy Pledge

[City of Savannah](#)

[Watch Video](#)

Savannah's City Council adopted the City of Savannah's 100% Clean Energy Pledge and went on to champion investments in clean energy, propelling Savannah to become the largest municipal provider of solar energy in all of Georgia.

Over 19 municipal facilities in Savannah are now powered by solar energy. The city expanded this offering to low and moderate-income residents to empower them in their homes to save

money. Additionally, this program is revenue positive for the City since its inception, and they've even been able to integrate a workforce development component into the program as well with the costs absorbed by the contractor. The City of Savannah program has now scaled statewide through a \$150 million grant via the Environmental Protection Agency, with the potential to go nationwide.
